

Title: FedRAMP High vs DoD SRG

FedRAMP High is the highest impact level under the FedRAMP program for civilian agency workloads containing sensitive but unclassified information. It baselines 421 controls from NIST SP 800-53 Rev. 5. Most Azure Government services carry FedRAMP High Provisional ATO, letting agencies inherit those controls.

The DoD Cloud Computing Security Requirements Guide (SRG) applies to workloads owned by DoD components. It defines Impact Levels 2, 4, 5, and 6 and layers DoD-specific requirements on top of FedRAMP High. IL5 requires additional physical and personnel separation; IL6 requires SIPRNet-connected classified regions.
